Identities in rings

Other structures

Basic remarkable identities:

• $(a + b)^2 = a^2 + 2ab + b^2$ • $(a - b)^2 = a^2 - 2ab + b^2$ • $(a + b)(a - b) = a^2 - b^2$.

Karatsuba identity (To be checked as an exercise!): Solves a problem stated in 1952 by Andrey Nikolaevich Kolmogorov (April 25, 1903 – October 20, 1987).

 $(100a_1 + a_0)(100b_1 + b_0) =$ $10,000a_1b_1 + 100((a_0 + a_1)(b_0 + b_1) - a_0b_0 - a_1b_1) + a_0b_0$

Hidden identities

Basic examples

Remarkable identities fo matrices

Identities in rings

Other structures

Basic remarkable identities:

• $(a+b)^2 = a^2 + 2ab + b^2$ • $(a-b)^2 = a^2 - 2ab + b^2$ • $(a+b)(a-b) = a^2 - b^2$.

Karatsuba identity (To be checked as an exercise!): Solves a problem stated in 1952 by Andrey Nikolaevich Kolmogorov (April 25, 1903 – October 20, 1987).

 $(100a_1 + a_0)(100b_1 + b_0) =$ $10,000a_1b_1 + 100((a_0 + a_1)(b_0 + b_1) - a_0b_0 - a_1b_1) + a_0b_0$

The "100" above can be replaced by any B, typically a power of 10 (or of 2).

Hidden identities

Basic examples

Remarkable identities fo matrices

Identities in rings

Other structures

Basic remarkable identities:

• $(a + b)^2 = a^2 + 2ab + b^2$ • $(a - b)^2 = a^2 - 2ab + b^2$ • $(a + b)(a - b) = a^2 - b^2$.

Karatsuba identity (To be checked as an exercise!): Solves a problem stated in 1952 by Andrey Nikolaevich Kolmogorov (April 25, 1903 – October 20, 1987).

 $(100a_1 + a_0)(100b_1 + b_0) =$ $10,000a_1b_1 + 100((a_0 + a_1)(b_0 + b_1) - a_0b_0 - a_1b_1) + a_0b_0$

The "100" above can be replaced by any B, typically a power of 10 (or of 2). The "10,000" above then becomes B^2 .

Anatoly Alexeevich Karatsuba (1937–2008)

 (a + b)² = (a + b)(a + b)

Hidden identities

Basic examples

Remarkable identities for matrices

Identities i rings

Other structure Computing (a + b)², for arbitrary matrices a and b:
 (a + b)² = (a + b)(a + b) = a(a + b) + b(a + b)

Hidden identities

Basic examples

Remarkable identities for matrices

Identities i rings

Other structure • Computing $(a + b)^2$, for arbitrary matrices a and b:

$$(a+b)^2 = (a+b)(a+b)$$

 $= a(a+b) + b(a+b)$
 $= a^2 + \underline{ab+ba} + b^2$

Hidden identities

Basic examples

Remarkable identities for matrices

Identities i rings

Other structure • Computing $(a + b)^2$, for arbitrary matrices a and b:

$$(a+b)^2 = (a+b)(a+b)$$

= $a(a+b) + b(a+b)$
= $a^2 + \underline{ab+ba} + b^2$
(as opposed to $a^2 + \underline{2ab} + b^2$).

(

Hidden identities

Basic examples

Remarkable identities for matrices

Identities in rings

Other structure • Computing $(a + b)^2$, for arbitrary matrices a and b:

$$(a+b)^2 = (a+b)(a+b)$$

= $a(a+b) + b(a+b)$
= $a^2 + \underline{ab+ba} + b^2$
(as opposed to $a^2 + \underline{2ab} + b^2$).

• Hence the problem boils down to $ab \neq ba$.

Hidden identities

Basic examples

Remarkable identities for matrices

Identities in rings

Other structures Hence, for matrices a and b, " (a + b)² = a² + 2ab + b² " is equivalent to " ab = ba".

Hidden identities

Basic examples

Remarkable identities for matrices

Identities ir rings

Other structures

- Hence, for matrices a and b, " (a + b)² = a² + 2ab + b² " is equivalent to " ab = ba".
- Similarly, each of the other two remarkable identities, $(a-b)^2 = a^2 - 2ab + b^2$, and $(a+b)(a-b) = a^2 - b^2$, is also equivalent to ab = ba.

Hidden identities

Basic examples

Remarkable identities for matrices

Identities ir rings

Other structure Hence, for matrices a and b, " (a + b)² = a² + 2ab + b² " is equivalent to " ab = ba".

 Similarly, each of the other two remarkable identities, (a − b)² = a² − 2ab + b², and (a + b)(a − b) = a² − b², is also equivalent to ab = ba.

• For $a = \begin{pmatrix} 0 & 1 \\ 0 & 0 \end{pmatrix}$ and $b = \begin{pmatrix} 0 & 0 \\ 1 & 0 \end{pmatrix}$ (previous example), we obtain $ab = \begin{pmatrix} 1 & 0 \\ 0 & 0 \end{pmatrix}$ and $ba = \begin{pmatrix} 0 & 0 \\ 0 & 1 \end{pmatrix}$.

Hidden identities

Basic examples

Remarkable identities for matrices

Identities ir rings

Other structures

- Hence, for matrices a and b, " (a + b)² = a² + 2ab + b² " is equivalent to " ab = ba".
- Similarly, each of the other two remarkable identities, (a − b)² = a² − 2ab + b², and (a + b)(a − b) = a² − b², is also equivalent to ab = ba.

• For $a = \begin{pmatrix} 0 & 1 \\ 0 & 0 \end{pmatrix}$ and $b = \begin{pmatrix} 0 & 0 \\ 1 & 0 \end{pmatrix}$ (previous example), we obtain $ab = \begin{pmatrix} 1 & 0 \\ 0 & 0 \end{pmatrix}$ and $ba = \begin{pmatrix} 0 & 0 \\ 0 & 1 \end{pmatrix}$.

The argument above is valid in any ring.

Remarkable identities for matrices

Identities in rings

Other structures

- Integers, reals, complex numbers all form commutative rings.
- 2×2 real matrices form a non commutative ring.
- The system of identities [rings with x · x = x (abbreviated x² = x)] defines Boolean rings (important in logic and probability theory).
- Every Boolean ring is commutative. (*Proof*: $x^2 = x \cdot x = x$, thus $4x = x^2 + x \cdot x + x \cdot x + x^2 = (x + x)^2 = x + x = 2x$, which yields 2x = 0; then $x + y = (x + y)^2 = x + x \cdot y + y \cdot x + y$ yields $x \cdot y + y \cdot x = 0$; however, $x \cdot y + x \cdot y = 0$, thus $x \cdot y = y \cdot x$).
