General goal Intractability for images of certain functors Aims There are numerous mathematical problems stated as "Describe all structures **M** such that $\varphi(\mathbf{M})$ ".

Intractability for images of certain functors

Aims

Ideals of rings

Antielementarity

Getting the functor Γ

Back to the problem on ideals of rings There are numerous mathematical problems stated as "Describe all structures \boldsymbol{M} such that $\varphi(\boldsymbol{M})$ ".

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

This looks more like a solution than a problem.

Intractability for images of certain functors

Aims

- Ideals of rings
- Antielementarity
- Getting the functor Γ
- Back to the problem on ideals of rings

- There are numerous mathematical problems stated as "Describe all structures \boldsymbol{M} such that $\varphi(\boldsymbol{M})$ ".
- This looks more like a solution than a problem. This, in turn, boils down to: What does "describe" mean?

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

Intractability for images of certain functors

Aims

- Ideals of rings
- Anti-
- elementarity
- Getting the functor Γ
- Back to the problem on ideals of rings

- There are numerous mathematical problems stated as "Describe all structures \boldsymbol{M} such that $\varphi(\boldsymbol{M})$ ".
- This looks more like a solution than a problem. This, in turn, boils down to: What does "describe" mean?
- We present a method enabling to verify that a given class $\{\boldsymbol{M} \mid \varphi(\boldsymbol{M})\}$ cannot be "described"

Intractability for images of certain functors

Aims

- Ideals of rings
- Antielementarity
- Getting the functor F
- Back to the problem on ideals of rings

- There are numerous mathematical problems stated as "Describe all structures \boldsymbol{M} such that $\varphi(\boldsymbol{M})$ ".
- This looks more like a solution than a problem. This, in turn, boils down to: What does "describe" mean?
- We present a method enabling to verify that a given class $\{\boldsymbol{M} \mid \varphi(\boldsymbol{M})\}$ cannot be "described" in certain ways.

Getting the functor Г

Back to the problem on ideals of ring ■ Reason for this: the modular law for ideal lattices of rings, $X \supseteq Z \Rightarrow X \cap (Y + Z) = (X \cap Y) + Z$, expressed by the first-order sentence

$$(\forall x)(\forall y)(\forall z)(z \le x \Rightarrow x \land (y \lor z) = (x \land y) \lor z)$$
(Mod)

Intractability for images of certain functors

Aims

Ideals of rings

Infinitary logic

Antielementarity

Getting the functor Γ

Back to the problem on ideals of rings ■ Reason for this: the modular law for ideal lattices of rings, $X \supseteq Z \Rightarrow X \cap (Y + Z) = (X \cap Y) + Z$, expressed by the first-order sentence

$$(\forall x)(\forall y)(\forall z)(z \le x \Rightarrow x \land (y \lor z) = (x \land y) \lor z)$$
(Mod)

(note the use of the abbreviations $z = x \land y$, $z = x \lor y$).

Intractability for images of certain functors

Aims

Ideals of rings

Infinitary logic

Antielementarity

Getting the functor Γ

Back to the problem on ideals of rings ■ Reason for this: the modular law for ideal lattices of rings, $X \supseteq Z \Rightarrow X \cap (Y + Z) = (X \cap Y) + Z$, expressed by the first-order sentence

$$(\forall x)(\forall y)(\forall z)(z \le x \Rightarrow x \land (y \lor z) = (x \land y) \lor z)$$
(Mod)

(note the use of the abbreviations $z = x \land y$, $z = x \lor y$).

The sentence (Mod) is not satisfied by the pentagon N₅ above (take x := a, y := b, z := c).

Intractability for images of certain functors

Aims

Ideals of rings

Infinitary logic

Antielementarity

Getting the functor Γ

Back to the problem on ideals of rings ■ Reason for this: the modular law for ideal lattices of rings, $X \supseteq Z \Rightarrow X \cap (Y + Z) = (X \cap Y) + Z$, expressed by the first-order sentence

$$(\forall x)(\forall y)(\forall z)(z \le x \Rightarrow x \land (y \lor z) = (x \land y) \lor z)$$
(Mod)

(note the use of the abbreviations $z = x \land y$, $z = x \lor y$).

- The sentence (Mod) is not satisfied by the pentagon N₅ above (take x := a, y := b, z := c).
- Therefore, N₅ does not appear as (Id R, ⊆), or even as a sublattice of (Id R, ∩, +), for any ring R.

Intractability for images of certain functors

Aims

Ideals of rings

Infinitary logic

Antielementarity

Getting the functor Γ

Back to the problem on ideals of rings ■ Reason for this: the modular law for ideal lattices of rings, $X \supseteq Z \Rightarrow X \cap (Y + Z) = (X \cap Y) + Z$, expressed by the first-order sentence

Proposition (W 2019)

Let λ be an infinite regular cardinal, let \mathbb{V} be a first-order language, let Ω be a set, and let $\Gamma: [\Omega]^{inj} \to \mathbf{Str}(\mathbb{V})$ be a λ -continuous functor. Then for every $f: X \to Y$ in $[\Omega]^{inj}$ with card $X \ge \lambda$, $\Gamma(f)$ is an $\mathscr{L}_{\infty\lambda}$ -elementary embedding from $\Gamma(X)$ into $\Gamma(Y)$.
